The videos to film — content guide

FORGERON · Lamine SACKO · Mali · UniPod Mali (ENI-ABT)

⏰ **Deadline: Wednesday 28 October, end of day.** The 4 photos, the content form and the countdown clips all go on the same day. The team lead uploads all 10 clips.

! Two different videos — and the trap is the orientation

VIDEO 1 — Countdown clip

📱 **PORTRAIT (phone upright)**

One single line: **your line from your team script**.

It is edited together with the clips of the other 9 members to make the team countdown video. One team per day, 4 to 8 November.

No editing, no filters, no music. You send the file exactly as it is to your team lead.

VIDEO 2 — Your innovator video

🖥️ **LANDSCAPE (phone sideways)**

Three parts: **main shot** (you facing the camera), **B roll** (you working), and an optional **sequence** showing the steps.

You edit it yourself: **30 to 60 seconds**, with subtitles and your name on screen.

You send it for comments **before** publishing.

⚠️ **Do not mix the two up.** The countdown clip is filmed **upright**, your innovator video **sideways**. A clip shot the wrong way round is unusable, and there will be no time to reshoot.

1 THE COUNTDOWN CLIP

`portrait · 1 line`

Your line is in your team script. Write it here before you film:

> ⟦ **YOUR LINE, COPIED FROM THE TEAM SCRIPT** ⟧

	SHOT TO FILM	WHY
☐	Hold the phone **upright**	Check before every take
☐	Look into the lens and smile	The lens, not the screen
☐	Say the key message **slowly and clearly**	It is the only moment that counts
☐	Speak with energy	The edit runs 10 people together — yours has to be alive
☐	Your own words are fine	As long as the key message stays the same
☐	Send the raw file to your team lead	No editing, no filters, no music

2 YOUR INNOVATOR VIDEO

`landscape · 30–60 s`

Part 1 — The main shot: what you say

You, facing the camera: who you are, the problem you solve, your solution. Here is the script, ready to say — it runs to 45 seconds.

> “My name is Lamine SACKO, I'm a mechatronics engineer from Mali.
>
> In our workshops, when a customer comes in with a complex part to make, we have to say no. The machine that could make it costs around forty thousand dollars imported, and you need a specialist programmer to run it — in Mali, those people are almost impossible to find.
>
> We built that machine in Bamako, for about fifteen thousand. And you don't program it. You talk to it. You say what you want in plain language, the AI shows you what it is about to do, and waits for you to agree before anything moves.
>
> The machine is built and it runs. We are now putting it into real workshops.”

Part 2 — B roll

Several short clips of a few seconds each, laid over your voice when you edit. Film each one **twice**.

	SHOT TO FILM	WHY
☐	The machine cutting, close on the tool	The strongest shot in your video
☐	Your hands on the tablet as you type the command	Shows the link from gesture to machine
☐	The app screen: the five axes, live	Zoom in, the text must be readable
☐	Wide shot of the workshop	Gives the real context
☐	You and Aboubacar in front of the machine	With his agreement
☐	The finished part in your hand	The proof, in one second

Part 3 — The sequence (optional, but it is your strongest card)

The steps in order, one short clip per step. In your case the sequence tells the whole chain — and it is what nobody else in the cohort can show.

STEP	WHAT YOU FILM
1	The part to make — a drawing, or a photo of a broken part
2	You asking the app, in plain language
3	The agent announcing what it will do and waiting for your confirmation
4	The machine starting — with the real sound
5	The finished part, off the machine

3 THE EDIT

`CapCut or InShot`

- ☐ Start with the main shot — keep your best take
- ☐ Lay the B roll over it while you talk
- ☐ Add the sequence (optional)
- ☐ **Add subtitles** — for people who don't understand the language
- ☐ Put your name and “Forgeron” on screen at the start
- ☐ **30 to 60 seconds. No more.**

4 THE RULES THAT APPLY TO BOTH VIDEOS

☐	**Use the phone's back camera**	Never the selfie camera — the quality isn't there
☐	**Ask someone to film you**	Or rest the phone on something steady
☐	**Good daylight**	Face a window, or outside in shade. Never with the window behind you
☐	**Quiet place**	Sound matters more than picture
☐	**No filters, no edits**	No sunglasses, no cap
☐	**Send the original file**	Not a screenshot or a WhatsApp re-send — the quality collapses

5 UPLOAD AND FILE NAMING

Name your files with your full name and country, and number the photos 1 to 4. Example: `Lamine_SACKO_Mali_1.jpg`. Upload the photos and the form to the shared Drive folder. **The countdown clip goes to your team lead**, not to the Drive — he uploads all 10 clips together.
